

Eye Care. We Care.

Say Good-Bye to Reading Glasses

The innovative KAMRA™ inlay can reduce dependency on reading glasses while maintaining distance vision. Those over 40 can now live with the visual ease, convenience and clarity that an active lifestyle demands. Because life has so much more to offer than the constant search for reading glasses.

Bense Vision - The Leader in KAMRA Vision

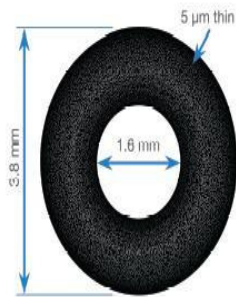

Bense Vision has become the province's first recognized Presbyopic Clinic, as KAMRA Vision is truly the first procedure of its kind to rightly address the loss of near vision. It's time to say "good-bye" to reading glasses!

Dr. Bense will be speaking at the European Society of Cataract and Refractive Surgery in Amsterdam this October. He will be demonstrating his KAMRA Vision surgical technique in a live lab. This is a great honor, congratulations Dr. Bense!

To book your complimentary consultation call 709-722-2020.

The KAMRA™ Inlay

The inlay design is based on the optical principle of a small aperture. It sharpens near vision by allowing only focused light to enter the eye.

8,400 laser etched holes to support corneal health

Smaller than a contact lens, Lighter than a grain of salt, 1/4 as thick as a strand of hair

The inlay is placed in the cornea and positioned over the pupil.

KAMRA is Freedom!

Dr. Marilyn Thompson

"Without even thinking, I picked up my Blackberry while waiting for my 12-hour post procedure appointment. Every word was amazingly clear. I have sunglasses in many colours because I like them and not just because they can take bifocals. KAMRA is freedom. Everyone at BENSE has been supportive, encouraging and professional. I know that I am in the best place with the best people." -Marilyn

Did you know...

KAMRA Vision is available in 47 Countries. Over 20,000 people have already undergone the KAMRA Procedure.

Predictable. Precise. Proven.
